Comp2151 Lab Exercise7: User Interface Design

Create a user interface in terms of web pages for the ABC Airline case study (provided at the end of this document) and create at least Three (3) screens for the Passenger and THREE (3) for the Airline Staff.

Submission: Please copy the Six screenshots in a Word document, covert it to pdf, and submit via Bright Space (Use the accompanying template)

You can use any software to create **wireframes** (Moqup, Mockflow etc). Following is some relevant information for user interface design and wireframes (Source Wikipedia)

To the end user the user interface is the software system itself, therefore the User Interface design should be started early on and be used to present to the client, get her feedback and iteratively grow and improve functionality.
User Interface Design defines how the system will interact with its potential users and is a very critical and important aspect of software system design.

A wire-frame is a visual guide that represents the skeletal framework of a website

Three aspects of an effective user interface

1. **Information design**
   To display information effectively for clear communication. For websites, information elements should be arranged in a way to reflect users' goals and tasks.

2. **Navigation design**
   A set of screen elements that allow the user to move page to page through the website. Two simple mechanisms are menus or side frames with links to other pages.

3. **Interface design**
   Placing and arranging interface elements (Common elements are: action buttons, text fields, check boxes, radio buttons and drop-down menus.) in a manner to make it easier and pleasant for the end user to use the interface (Usability)

ABC Airline:

ABC Airline offers flights between major cities of Canada and the USA. Passengers can book, cancel, and reschedule their airline tickets online, by picking the dates of travel, origin and destination cities and class of travel. Booking will be confirmed after successful payment processing via a major credit card as entered by the client. Passengers accumulate points for every dollar they spend on travel and may redeem these points to buy travel and/or any other travel related services

Cancellations and rescheduling of tickets may only be allowed for certain types of booking after payment of a fee. Some types of bookings allow free cancellations or rescheduling. Within 24 hours of the flight the passengers can also login and process a check in after which they are provided a boarding pass and seat numbers. Passengers are provided a seating map with a price for premium seats and they can pay extra to buy a premium seat. Based on the type of booking passengers may be allowed free checked in bags or there may be a fee for each bag they want to check in. Passengers may also buy inflight wi-fi service or food items with their booking while other passengers who have accumulated enough loyalty points or have a certain type of booking can enjoy these services for free. They may also buy in flight items from a member of flight crew using their credit/debit cards.

Staff members may also do check ins or may allow free checked baggage to some passengers as a courtesy under special circumstances. They may also change passenger's seats or their class of travel (Business class, first class) under some special circumstances. Managers have special powers and they can allow full or partial refunds for tickets (which are not other wise eligible for a refund) or offer special discounts, offer free travel vouchers or provide other perks for certain passengers under special circumstances. {You may make any other reasonable/educated assumptions based on current commercial airline policies and procedures)
