

The Adapter Pattern

Code for Vendor.cs:

```
using System;

namespace ShippingCosts_AdapterPattern
{
    class Vendor
    {
        static void Main(string[] args)
        {
            ITarget adapter = new Adapter();

            Console.WriteLine("Enter the weight of the package: ");
            double packageWeight = Convert.ToDouble(Console.ReadLine());

            double shippingCost = adapter.CalculateShippingCost(packageWeight);

            Console.WriteLine("The shipping cost is: $" + shippingCost);

            Console.ReadLine();
        }
    }
}
```
